

Manhattan Psychiatric Center
Regional Advisory Committee Meeting

March 24, 2014

1. What do you like about the idea of EMR/EHR?

Availability of instant information and also accountability of electronic finger print and it elevate my concern because of the "BREAK THE GLASS" accountability.

2. What concerns do you have about EMR/HER?

Instant access to medication information

What a person is allergic to

Family and partners who a person may want involved due to crisis inventions

3. What things should we add that would be helpful to recipients? WRAP? Advance Directives?

WRAP/Advance Directives because it's a good tool to measure overall wellness and it applies to when a person is well; Psychiatric Advance Directives to informative documentation not just for the doctors/psychiatrist, for family, friends and anyone the person deems appropriate to access.

4. How would you want access to your EMR/EHR?

A person should be able to create and access his own EMR/HER through personal computer, laptop, smart phone, IPAD etc. A person should have access to their own EMR/HER through their provider of medical, psychiatric services.

5. What special concerns should we think about forensic, HIV?

The special concerns should be considered for forensic and persons living with HIV

Prejudges

a. By employer

b. By provider for example mentalism

Discriminations public/self-based on diagnosis or imprisonment

By choice of the individual consumer in case of computer illiteracy or inability to read or write or anyone with a lack of empathy preparing to create and develop a peer specialist should be involved and facilitate the process.

It should be a simple and similar a WRAP plan an Advance Directive a combination of both.

The reason being the most simple ability to read and write posed by of the consumer to sit down with peer specialist or psychiatrist, therapist to create, complete the form.
