

Greater Binghamton Health Center
Regional Advisory Committee Meeting

March 24, 2014

1. What do you like about the idea of EMR/EHR?

- a. Hospitals can communicate,
- b. convenience,
- c. continuity of care,
- d. complete record.

2. What concerns do you have about EMR/EHR?

- a. Can we opt out,
- b. security of records, who will transcribe records and will they be accurate, can the government get a hold of these records, records may be accessed by people that shouldn't be seeing them, would it be a problem is more than one doctor/agency was on the same record at the same time?, systems crash – would information be lost? How would people that can't read or write access their records? What if people don't want to have their records online? What to do if you forget your password.

3. What things should we add that would be helpful to recipients? WRAP? Advance Directives?

No WRAP because it's fluid...it changes, in favor of including WRAP, Health care proxies/directives, family history capability.

4. How would you want to access your EMR/EHR?

Kiosks in different locations for those who don't have home access (with printing capability – no fee for printing) especially in rural areas – doctor's offices, etc. public areas – private space, free app's for people that do have access to their record (phone or computer), services and supports in the area – interface, hyperlinks.

5. What special considerations should we think about? Forensics? HIV?

No criminal record included, people pass judgment on you if they found out you had an illness, if it IS included – is there any way to protect the consumer?
