Patient Safety Standards, Materials and Systems Guidelines
Recommended by the
New York State Office of Mental Health

With respect to NYS-OMH operated facilities, these Guidelines apply solely to new construction and major renovation projects. Existing facilities should use these Guidelines as a reference document whenever they make improvements.
# Patient Safety Standards, Materials and Systems Guidelines

28th Edition | July 31, 2022
This document offers guidance with respect to patient safety features in the inpatient psychiatric environments throughout New York State. It grows out of the standards of new construction for the New York State Office of Mental Health’s (NYS-OMH) inpatient hospitals in order to provide guidance for:

- Existing and new NYS-OMH state-operated inpatient facilities
- Psychiatric units in NYS-OMH licensed Article 28 general hospitals
- NYS-OMH licensed Article 31 hospitals

This document is not intended to provide guidance for outpatient psychiatric facilities. Generally the risks associated with outpatient facilities may not warrant special environmental precautions.

The purpose of these guidelines is to provide a selection of materials, fixtures, and hardware that the NYS-OMH has reviewed and supports for use within inpatient psychiatric units to further the agency’s goal of reducing the risk of harm to individuals in inpatient settings. Utilization of any of these products is not mandatory.

The NYS-OMH would be pleased to evaluate other products identified by hospitals.

Many of the items in this document represent the current state of the art. It is anticipated that additional or more effective products will continue to be developed. The NYS-OMH intends to periodically update these guidelines to keep current with these changes, but the hospitals also have an obligation to continue to review products that will assist in this goal. Please note that due to the nature of ongoing product developments in the market, manufacturers may make modifications to products at any time, without providing notification to NYS-OMH. Please be aware that such modifications may alter the products’ ligature resistance evaluations and therefore require further testing to assess risks.

The products and systems included in this document have been tested for patient safety in conformance with OMH testing protocols, but the existing or newly-built environment introduces a unique complexity that must be considered prior to incorporating any of these products. Evaluation of programmatic appropriateness and architectural detailing shall not be omitted from the product selection process. In particular, retrofit conditions must be understood before a product is provided for the facility.

The items selected here represent styles and properties of products that help lower patient risk while on an inpatient psychiatric unit. However, installation of these products will not eliminate all risks.
Introduction

Approach

OMH supports a multi-directed approach to the reduction of patient harm on inpatient psychiatric units including the following:

- Completion of a patient risk assessment
- Completion of a physical plant risk assessment
- Ongoing staff training to ensure awareness of potential risks on units
- Installation of products that reduce risk in all patient areas
- Routine inspections of inpatient psychiatric units to ensure safety levels are maintained

Additional and more detailed information on some of the items found in these standards may be available from NYS-OMH.

By providing these guidelines the New York State Office of Mental Health neither endorses nor promotes any product or manufacturer. OMH does not guarantee the performance of any product. OMH recognizes that it is not possible to evaluate all products that are for sale. Under these circumstances it is at NYS-OMH’s discretion which products are selected for review.

The absence of any product from the guidelines does not necessarily mean that the product is unsafe or unacceptable for use (refer to the paragraphs that follow). If a health care facility has installed products that were previously recommended in an earlier edition of the Patient Safety Standards (PSS) but are no longer listed in the PSS, it is the responsibility of the health care facility to reassess that product to determine whether its continued use is consistent with that hospital’s safety risk assessment policies.

It is crucial that hospital managers complete risk assessments that go beyond the selection of the materials, furnishings, and fixtures found in these Patient Safety Standards. The Facilities Guidelines Institute (FGI), “Guidelines for Design and Construction of Healthcare Facilities” provides clear, detailed direction regarding a hospital’s responsibility to be in compliance with patient safety requirements. The sections covering the Safety Risk Assessment (SRA) describe general risk assessment procedures. Refer to the 2018 edition of FGI, which has been adopted by The Joint Commission. Also refer to applicable state regulations which may have adopted alternative editions of the FGI.

Within this larger construct, the selection of products to be used in the built environment is but one component of risk management policies and procedures that every healthcare facility is responsible for developing and maintaining.
Introduction
Conventional Practice prior to NYS-OMH Patient Safety Standards

Focus Above the Waist

The reduction of self harm incidents is often a matter of life or death. Suicide attempts using a ligature (e.g. strangulation) are the most prevalent form of self harm. This was initially addressed in modern hospital design by strongly focusing on the elimination of ligature attachment points that were above the waist line.

Above the Waist Ligature Attachment Points:

- Fasteners
- Door Hinges
- Door Closers
- Windows & Vision Panels
- Access Doors
- Ceiling Systems
- Shower & Privacy Curtains
- Clothes & Towel Hooks
- Closet Bars
- Mirrors
- Toilet Partitions
- Window Treatments
- Bulletin Boards
- Picture Hanging Systems
- Cabinet Hardware
- Sprinklerheads
- Showerheads
- Medical Gas Enclosures
- HVAC Devices & Covers
- Thermostats
- Electrical Receptacles
- Light Fixtures
- Fire Alarm Components
Introduction
Current Best Practice

Focus Everywhere

Today, all psychiatric healthcare facilities, whether new or existing, are required to meet comprehensive accreditation standards to ensure that the risks to patient safety are minimized. Principles that support patient safety strategies avoid systems, assemblies and materials that can be weaponized, yield sharp edges, or provide ligature points in all locations accessible to patients.

Additional Ligature Attachment Points to Consider:

- Door Handles
- Door Bumpers
- Wall Base
- Trim Strips between Assemblies
- Toilet Accessories
- Grab Bars
- Fire Extinguisher & Hose Cabinets
- Furniture
- Lavatories
- Lavatory Faucets
- Valves
- Shower Controls & Activators
- Plumbing Traps & Piping
Introduction
Risk Management

Risk Management, Not Risk Elimination

A2.5-1.5 Environment of Care
The majority of persons who attempt suicide suffer from a treatable mental disorder or a substance abuse disorder or both. Patients of inpatient psychiatric treatment facilities are considered at high risk for suicide; therefore, the environment should avoid physical hazards while maintaining a therapeutic environment. However, although a safe environment is critical, no environment can be entirely safe and free of risk. The built environment, no matter how well designed and constructed, cannot be relied upon as an absolute preventive measure. Staff awareness of the environment, the latent risks of that environment, and the behavior risks and needs of the patients served in that environment is absolutely essential. Different organizations and different patient populations will require greater or lesser tolerance for risk.
Introduction
Risk Assessment

High Risk approved products are safe for all locations. Though High Risk products may be safe for all areas, they may not be appropriate for all areas. In many cases the High Risk product will look too institutional for the area. Determining an individual room's risk assignment will depend on a room-by-room Risk Assessment of all areas of the facility which has been conducted specifically for each facility using that hospital or system's own risk assessment tool. The following are typical groupings of room by risk. Each hospital's assessment may vary based upon patient profile, staffing, or unit geography.

Typical High Risk Areas
Areas with solitary and/or unsupervised patient use.

Typical Medium Risk Areas
Patient access is controlled, or use is supervised with no solitary and/or unsupervised use.

Typical Low Risk Areas
Staff only areas. No Patient Use.
Introduction
Nomenclature & Applicability

Notes like this on each page will identify additional considerations that are applicable, and also will identify alternative products that are acceptable as minimum standards for Article 31 hospitals, Article 28 hospitals, and state-operated hospitals.

Accepted by OMH
Items with this symbol constitute a best practice for all existing facilities and a minimum standard for new construction and renovation projects at NYS-OMH’s state-operated inpatient hospitals. Unless alternatives are identified in the notes section of the page, such items are also minimum standards for Article 31 and Article 28 hospitals.

Under NYS-OMH Evaluation
Items with this symbol are currently being assessed by NYS-OMH for suitability in NYS inpatient psychiatric hospitals or units.

Retrofit
Items with this symbol are not suitable for use in new construction but are acceptable for renovation in NYS inpatient psychiatric hospitals or units.

Use with Caution
Items with this symbol might be suitable for certain inpatient environments; however, they should be used with caution. Some of these items have institutional characteristics that are not appropriate for an environment that is certified by the Joint Commission, which requires non-institutional fittings and fixtures. Others items have inherent risks that must be evaluated for their appropriateness for the intended application. Typically, the associated notes describe why the device is to be used with caution.

NYS-OMH Rejected
Items with this symbol are unsuitable for use in new construction or renovation in NYS inpatient psychiatric hospitals or units.

Paper Clip Resistant
Items with this symbol have withstood paper clip testing in addition to all other applicable testing methods.
Introduction
Product Evaluation Process

NYS-OMH evaluates products for inclusion into its Patient Safety Standards using a variety of criteria. These criteria fall into two categories; Primary Criteria and Secondary Criteria.

Primary Criteria
- Ligature Resistance: Looping
- Ligature Resistance: Wedging
- Cutting
- Jumping
- Tamper Resistance
- Weaponization
- Contraband Storage
- PICA/Ingestion

Secondary Criteria
- Ligature Resistance by combining a ligature with other readily available objects
- Ligature Resistance that is the result of the configuration in which a product is installed
- Codes & Regulations
- Therapeutic Environment & Appearance
- Constructibility
- Durability
- Maintenance

The presence of paper clips in even the most rigorously monitored inpatient environment is difficult to control. Because paper clips may be available to patients, tests for product inclusion in the OMH Patient Safety Standards include an attempt to utilize paper clips in concert with other objects to develop ligature on tested items. It should be assumed that almost anything in the patient environment can be compromised by a paper clip; for those items that withstand the ligature testing with use of paper clips, a product may be accepted by OMH and receive a special notation indicating that it has withstood such testing methods. The symbol 📣 indicates a product withstanding paper clip testing in addition to all other applicable methods of testing and is appropriate for use in high risk areas.

As is written on page 4 of this document, a much more comprehensive assessment of risk in the patient environment is always necessary in order to meet the spirit of the Patient Safety Standard recommendations.

The availability of safe products for the inpatient environment is a growing and evolving market. New products are routinely introduced by manufacturers. Products that were once accepted by NYS-OMH in previous versions of the Patient Safety Standard may be rejected or phased out in future versions in light of new products or new knowledge about their risks. For more information about the NYS-OMH Product Evaluation Process, contact NYS-OMH.
Anti-Barricade Strategies

An unintended consequence of providing more patient privacy is the increased opportunity for a patient to use a bedroom or bathroom door as a barricade. Solutions range from direct penetration of the door by force to using advanced door systems that can be opened outward in an emergency situation. The direct solution is more economical at first, but will require replacement of the door. The advanced door technology does not harm the door, but significantly increases the initial construction cost. The ten options listed below span this continuum.

## SWITCH Anti-Barricade Door System

**Kingsway Group**  
www.kingswaygroupusa.com

**Switch Anti-Barricade Door System**  
Double action anti-barricade door system includes hollow metal frame with single rabbeted latching jamb, solid core wood door, lockset/handle, and KG280 switch hinge system. UL1784 rated for smoke leakage.

Optional accessory:  
**KG35 Double Action Transom Closer**  
Fully recessed closer available for use with the Kingsway SWITCH Anti-Barricade Door System. Closer is double-acting.

## Anti-Barricade Hardware | Code Notes

For corridor doors, verify Life Safety Code requirements to limit passage of smoke. Specify appropriate gap tolerances at top and jambs.

## Anti-Barricade Hardware | Constructibility Notes

- Coordinate backset of lockset/handle when providing swing/emergency stops to avoid handle/stop operational conflict.
- Refer to manufacturer’s data when using removable stops in fire rated assemblies.
- Coordination between door opening width, hinge width, and door panel width is required.

## Cautions:

- All hinges inherently carry risk due to multiple joints between moving parts, and extremely low acceptable tolerances. Consistent quality in manufacturing may be difficult to achieve and should be inspected in the field.

Accurate Lock & Hardware
www.accuratelockandhardware.com

Keyed Emergency Stop
ADL-CEK, ADL-OEK
Double lip strikes with keyed emergency stop. Designed to restrict and protect against unauthorized outswinging door by using a key to lock stop in projected position.

Anti-Barricade Hardware | Code Notes
For corridor doors, verify Life Safety Code requirements to limit passage of smoke. Specify appropriate gap tolerances at top and jambs.

Anti-Barricade Hardware | Constructibility Notes
• Coordinate backset of lockset/handle when providing swing/emergency stops to avoid handle/stop operational conflict.
• Refer to manufacturer’s data when using removable stops in fire rated assemblies.
• Coordination between door opening width, hinge width, and door panel width is required.

Cautions:
• A non-locking emergency stop may allow patients to depress the stop and swing the door in the opposite direction. Overpronation of the door in this direction has, in some instances, resulted in patients breaking the door.
• Small emergency stops that concentrate the door closing pressure on a small surface area have been known to result in breakage of structural composite lumber doors when doors are slammed by patients.
• In-situ evaluation reveals that the use of a single locking point on the rescue stop does not adequately secure the stop when a door is being subjected to abuse (i.e. being repeatedly slammed). It is recommended that at least two locking points be provided: one at the top 1/3 point along the height of the door and one at the bottom 1/3 point along the height of the door to better distribute the force of the slamming along the door stile.

**Emergency Release Stop (ERS)**

Pemko Emergency Release Stop provides emergency outward opening operation of doors that normally open inwards. The door stop has a single point lock at the top. The stop is unlocked by a special tool and swings open with an integral grab handle. The stop hinge has a hospital tip.

---

**Anti-Barricade Hardware | Code Notes**

### Royde & Tucker Ltd.
[www.ratman.co.uk](http://www.ratman.co.uk)

**Emergency Stop H131-105**

The release device can be depressed to allow the door to open outward and allow access to the room.

*Note: Allows for wedging ligature.*

### Laidlaw
[www.laidlawdirect.com](http://www.laidlawdirect.com)

**Swing Away Stop**

Note: Potential for looping with this hardware. Stop is not continuous and creates a ligature point.

### McKinney
[www.mckinneyhinge.com](http://www.mckinneyhinge.com)

**DS-6 Emergency Stop**

The release device can be depressed to allow the door to open outward and allow access to the room.

*Note: Allows for wedging ligature.*
## Anti-Barricade Strategies

### Alternate Removable Stop

#### Anti-Barricade Hardware | Code Notes
For corridor doors, verify Life Safety Code requirements to limit passage of smoke. Specify appropriate gap tolerances at top and jambs.

#### Anti-Barricade Hardware | Constructibility Notes
- Refer to manufacturer’s data when using removable stops in fire rated assemblies.
- Coordination between door opening width, hinge width, and door panel width is required.

**Anti-Barricade Hardware | General Notes**

Primary door requires continuous hinges with hospital tips. Edge bevel may need to be increased. Edge strip shall be securely fastened.

**Anti-Barricade Hardware | Code Notes**

- Manufacturer must verify the fire rating of the door.
- For corridor doors, verify Life Safety Code requirements to limit passage of smoke. Specify appropriate gap tolerances at top and jambs.

**Anti-Barricade Hardware | Constructibility Notes**

- Coordination between door opening width, hinge width, and door panel width is required.
- Manufacturing and installation tolerances may result in a wedgeable gap between door leaf and wicket leaf.

**Caution**

All hinges inherently carry risk due to multiple joints between moving parts, and extremely low acceptable tolerances. Consistent quality in manufacturing may be difficult to achieve and should be inspected in the field.

Wood Wicket Door

Custom Wood Wicket Door
Multiple Manufacturers

Note:
- Manufacturing and Installation tolerances result in a wedgeable gap between door leaf and wicket leaf. The primary door leaf’s integrity is inherently compromised with the introduction of a wicket door, making it susceptible to breakage.
## Anti-Barricade Strategies

### Secondary Door in Sidelite Frame

#### In-swinging Main Door and Out-swinging Sidelite Door with Center Mullion

#### Assembly

This assembly uses a hollow metal frame sidelite with an out-swinging panel for anti-barricade. The main door is fitted with ligature-resistant door hardware and has a full hollow metal stop. The sidelite panel can be made of wood or hollow metal and be outfitted with a keyed deadbolt on the corridor side.

### Double Leaf Door with Inactive Leaf

#### In-swinging Active Main Door and Out-swinging Inactive Door

Provide keyed flush bolts activated from corridor side on top and bottom of the inactive leaf.

**Caution:** Door configuration may require special installation requirements when utilizing Door Top Sensor protection.

![Double Leaf Door Diagram](image)

### Anti-Barricade Hardware | Constructibility Notes

- Flush bolts shall be substantial enough to withstand significant impact. Bolts may shear off if embedment is inadequate.
- Installation tolerances are critical to provide patient privacy.
- Solid core wood doors may not offer the required durability with this anti-barricade door solution.
Anti-Barricade Strategies

Accurate Lock & Hardware
www.accuratelockandhardware.com

LR-SDS Anti-Ligature Sliding Door System

Concealed track system hangs a 1 3/4 inch door.
Concealed floor guide keeps door flush against wall.
Concealed vertical rod bolt locks into track.
Ligature-resistant thumb turn LR-ADA-F and flush pull U7001UL.
Top door edge not accessible.
Dampened closure.

Anti-Barricade Hardware | Constructibility Notes
• Coordination between door opening width, tack length, and door panel width is required.
• Space between wall and door pane is limited to 1/8”. Wall base shall be coordinated with this dimensional limitation.

#### ENP15-300 Ligature Resistant In Suite Bathroom Saloon Door with 11lbs Breakaway
Recommended for en-suite or gang bathrooms. Not recommended as bathroom doors shared between two bedrooms. Soft bathroom privacy door with ligature safe breakaway design, releases with less than 11lbs weight.

Includes frame-mount magnetic hinges and lightweight soft-foam door. Magnets are secured to the door frame and not accessible by patients.

**Cautions:**
- Cannot achieve positive latching (privacy caution)
- Foam panel can be damaged with a plastic knife.
- Mounting hardware on the panel is hard plastic and may be weaponized if panel is removed.

**Norva Plastics, Inc.**

[www.norvaplastics.com](http://www.norvaplastics.com)

**Toilet Partitions, Sentinel Event Reduction (SER) Door with Sloped Top**

Use only at en-suite or gang bathrooms. Never use in bathrooms shared between two bedrooms. Flexible gasket provides friction stop between partition and frame/wall.

**Cautions:**
- Cannot achieve positive latching (privacy caution)
- Maintain 3” gaps between partition and frame to prevent wedging (at gasket location)

**Norva Plastics, Inc.**

[www.norvaplastics.com](http://www.norvaplastics.com)

**Toilet Partitions, Sentinel Event Reduction (SER) Door with Collapsible Top**

Note: OMH has rejected this product as it contains features that may allow injury to patients including pinched fingers, and if the collapsible edge malfunctions, it provides a ligature point. Also, since the top portion of the door is hollow, the design allows for the possibility of contraband to be placed in the top of the door.

Seclusion Room Standards

General Notes
Protrusions and outside corners are not permitted in Seclusion Rooms. Use polycarbonate mirrors for visibility in the corners of room adjacent to the door. Installation of padding systems is recommended on vertical and horizontal surfaces including the door, door frame, window jambs and stool; however, the use of padding is not mandatory. Provide hardware with immediate positive latching (Slam Lock Function). Provide Cremone bolts, multi-bolt or multiple face-mounted magnetic locks on exterior of Seclusion Room (frame and angle at edge of door) with uninterpretable power supply.

Installation Notes
The shear lock alignment is critical for proper function. Shear locks have a tendency to become misaligned over time.

Code Notes
Provide a one hour fire rating at padded room to conform with IBC. In most cases, rating the perimeter of the Seclusion Suite is the most constructible solution. Refer to FGI Guidelines for other specific requirements.

Securitech
www.securitech.com

Multi-Point Deadbolt Mortise Lock
Select lock function from options below:
USL-K3-IHB2: (slam)
Latches upon closure.
Key only projects/retracts bolts and latch. Exterior side of door has freely rotating lever/pull. Interior cylinder optional.
UML-K3-IHB2: Does not latch upon closure.
Key only projects/retracts bolts. Exterior side of door has freely rotating lever/pull. Interior cylinder optional.

DuraVision Mirror Systems
www.correctionsmirror.com

Polycarbonate Mirror
Quarter dome polycarbonate mirror. Ligature-resistant connections and tamper-resistant fasteners. Provide tamper-resistant sealant at mirror frame perimeter.

Marathon Engineering Corporation
www.goldmedalsafetypadding.com

Gold Medal Safety Padding
1" thermoset polyurethane elastomer material bonded to 5/16" OSB backer board. Class A finish. Padding material is uniform and smooth with no cracks or open seams.

Prime Coat Coating Systems
www.primecoat.com

PC Safe Cell 4730 System
Unified system of high density, high impact rubberized core with bonded polymer topcoats. Padding material is uniform and smooth with no cracks or open seams.
Tamper-Resistant Fasteners

All fasteners accessible to patients shall be tamper-resistant of the hexalobular (6-lobed), pin reject, internal drive system, meeting ISO Standard 10664.

Notes:
- Limit different types of fasteners used throughout a facility for ease of maintenance.
- Fasteners will loosen with use and will require periodic inspection.

General Notes
Tamper-resistant fasteners are to be used for all fasteners exposed to view on every product and assembly accessible in the inpatient environment, and should be noted explicitly in the construction documents.

Performance Criteria
ISO 10664:2014 specifies the shape and basic dimensions for bolts and screws, including the gauging method. The curvature of the contour of the hexalobular internal driving feature is defined and additional information which can be used when drawing the contour given.

Alternates
Minimum standard for facilities other than NYS operated: 2-pin spanner head fasteners.

Additional Notes
McGard and Bryce are just two among many acceptable manufacturers of tamper-resistant fasteners relying on limited distribution tools or custom keyed fasteners. Generally custom tooled fasteners like McGard will cost more than stock fasteners.
Security Sealants, Tamper-resistant

**General Notes**
Picking and Pica behaviors can impact sealant choices. Tamper-resistant sealants are generally flexible, abrasion resistant and highly tenacious. They are typically urethane or silicone-based sealant technology, in both one and two-component formulas. Tamper-resistant sealants are appropriate for use in most inpatient areas.

Acceptance of product in risk areas is determined primarily by the ligature resistance of the sealant. Tamper resistance is secondary to ligature resistance.

**Performance Criteria**
ASTM C290.

**Installation Notes**
All sealants must be installed per manufacturer’s recommendations for ventilation, safety, and cure times.

**Additional Notes**
Some sealants may not be suitable for use where contact with food may occur. Some sealants may have VOC or other chemical content that generates odors and fumes during curing. All sealants must be reviewed for potential impact on occupants prior to use.

---

**Pecora Corporation**
www.pecora.com

**Dynaflex SC**
Security grade one part polyurethane
- Resistant to ligature in 1/16” joint and at 3/16” joint
- Medium tamper resistance
- Joints can easily be cut with utility knife
- Medium difficulty in application and tooling
- Available in 2 standard colors

---

**Sika Corporation**
www.usa.sika.com

**Sikaflex 11FC**
Tamper-resistant one part polyurethane
- Resistant to ligature in 1/16” joint, slightly resistant at 3/16” joint
- High tamper resistance
- Joints can easily be cut with utility knife
- Easily applied and tooled
- Available in 3 standard colors (white, black, gray)

---

**Dow Corning**
www.dowcorning.com

**Dowsil 995**

- Easily applied and tooled
- Available in 6 standard colors
Division 08 | Openings
Door Hardware, General

General Notes

This document is meant to be used in consort with the NYS-OMH Inpatient Adult Standards, Inpatient Children & Youth Standards, Specification Guidelines Section 087100 and Appendix F, and the OMH Facility Program Manual. Numerous lockset functions are appropriate for the hospital setting and these are discussed specifically within the Specification Guidelines.

Doors and hardware present many ligature opportunities. The design team must review all potential ligature opportunities with the facility, determine which are most important to address and identify the most effective remediation methods.

Door opening assemblies present the following potential ligature opportunities that are very difficult to mitigate:

● Looping or wedging over the top of the door leaf
● Wedging between the door and the frame
● Wedging at the hinge

Additional Notes

Specify tamper-resistant, flush mounted set screws. A recessed set screw shaft provides a ligature opportunity for the stiff end of a shoelace.

The specifier must select the appropriate latch bolt for each lock set based on the facility's risk assessment and criteria:

● Standard latch bolt: Provides positive latching and locking. Presents a looping opportunity.
● 2-piece anti-friction latch bolt: Provides positive latching and locking with an increased level of security (resistant to lock-picking). Presents a looping opportunity.
● Beveled latch both: Provides positive latching and locking. Can be compromised with a card and other commonly accessible items (i.e. folder paper). Resists looping.

Installation Notes

Narrower tolerances, required to achieve ligature resistance, necessitate careful installation and more frequent periodic field adjustment than is necessary with traditional lever trim.

Post-installation commissioning of each lockset by the manufacturer is recommended.
Division 08 | Openings
Door Hardware, Continuous Hinges

General Notes
See Door Hardware Introductory Page.
Continuous hinges are recommended for all swinging doors within inpatient units.

Performance Criteria
Specify Hospital Tips (HT) to address ligature point at top of hinge.

Installation Notes
Prepare and reinforce door frame in strict compliance with hardware manufacturer’s written instructions and installation templates.

Additional Notes
See NYS OMH Guidelines Specifications for Hollow Metal Frames and Doors and Solid Core Wood Doors.
Coordinate all door opening assemblies with electronic hardware.

Caution Notes
All hinges inherently carry risk due to multiple joints between moving parts, and extremely low acceptable tolerances. Consistent quality in manufacturing may be difficult to achieve and should be inspected in the field.

Division 08 | Openings
Door Hardware, Handles - Specialty Ligature Resistance

General Notes
See Door Hardware Introductory Page.

Beveled latchbolts can be compromised, permitting access to rooms, and therefore should never be used on locking doors without understanding that the locked door can be easily breached.

Specify a 2-piece anti-friction latchbolt for access to staff-only rooms and other areas identified as low or medium risk.

The specifier must select the appropriate latch bolt for each lock set based on the facility’s risk assessment and criteria:

- Standard latch bolt: Provides positive latching and locking. Presents a looping opportunity.
- 2-piece anti-friction latch bolt: Provides positive latching and locking with an increased level of security (resistant to lock-picking). Presents a looping opportunity.
- Beveled latch both: Provides positive latching and locking. Can be compromised with a card and other commonly accessible items (i.e. folder paper). Resists looping.

Accurate Lock & Hardware

### General Notes

See Door Hardware Introductory Page.

Toilet Rooms and Bathrooms with privacy functions provide a potential for barricade and self harm because patients are unsupervised. Thumbturns used at these doors must be of a ligature-resistant design.

Specific features available under an "Institutional Privacy" lockset vary between manufacturers. The features needed at each facility should be specifically reviewed with each facility.

Not all door hardware manufacturers provide an institutional privacy function and not all institutional privacy functions are ligature-resistant.

Certain features are mandatory and certain features are subject to facility preference:

**MANDATORY:**
- ADA compliance
- Ligature resistance of thumbturns
- Outside key override of held thumbturn

**OPTIONAL** (feature availability may vary by manufacturer):
- Lock releases upon door closing
- Lock does not release upon door closing
- Outside locking of door by key
- No outside locking of door by key

Required anti-barricade strategies and lockset functionality (including Institutional Privacy features) should specifically reviewed with the facility.

Door Hardware, Closers

General Notes
See Door Hardware Introductory Page.

Mount closers on public side of doors to rooms with patient access, or on the secure side of doors that need to automatically lock or latch, such as Store Rooms, Soiled Utility Rooms, and doors with card access readers.

Consider use of concealed closers where risk assessment indicates that surface-mounted closers are not acceptable.

Performance Criteria
Specify gap tolerance at top to be 1/8" maximum.

Doors with concealed closers that are intended to receive door top sensors may require a face-mounted sensor to avoid conflict with the closer arm.

Caution Notes
All closers inherently carry risk. Do not use closers unless required by code, or at doors that shall control patient access in supervised spaces.

Sargent

Division 08 | Openings
Door Hardware, Door Top Sensors

General Notes
See Door Hardware Introductory Page.

Alarm annunciation may be visual and/or auditory, and can be provided locally at door and/or remotely at nurse station. Installing alarm resets at the alarmed doors will require staff response to the alarm location.

The tops of doors are traditionally of the most readily available ligature opportunities. Strategies to limit this opportunity include removing doors, cutting down the tops of doors or sloping the tops, and applying door top sensors. Door top sensors use either pressure sensors or light beams.

Installation Notes
The installation of door top sensors must be carefully coordinated with other door hardware items such as closers and continuous hinges. Furthermore, mounting a door top sensor on a door panel that is set in from the face of the hollow metal frame may result in false alarms when the door panel swings past 90 degrees and connects with the frame edge.

An electric transfer hinge may be required with the use of door top sensors.

Door Control Services, Inc.
www.doorcontrolservices.com

Top Door Alarm
The Top Door Alarm involves photoelectric sensors that are positioned on the door frame and on the door within ligature-resistant casings. This ensures maximum coverage by detecting the presence of any foreign objects interrupting the thru-beams between the transmitters and receivers.

Two configurations of the photoelectric sensor type of system are offered:
Configuration A: Two sets of Alarm Light Sensors for top door detection.
Configuration B: One set of Alarm Light Sensors for bottom door detection.

Cautions:
• This product produces a visible light beam that may be disturbing to patients. It should be noted that beam is continuously visible to patients, especially when bedroom is dark.
• Use with caution in a double leaf door configuration with an inactive leaf, as installation requires very tight tolerances.

The Door Switch
www.thedoorswitch.com

The Door Switch
Top of door, weight pressure activated sensor that extends above the door.
General Notes
See Door Hardware Introductory Page.

Alarm annunciation may be visual and/or auditory, and can be provided locally at door and/or remotely at nurse station. Installing alarm resets at the alarmed doors will require staff response to the alarm location.

Glazing, General

General Notes

Following are risks and performance criteria to consider when specifying glazing in all areas that are accessible to patients, whether unsupervised or supervised. All windows and glazing in areas accessible to patients shall be evaluated as part of the Facility Risk Assessment. Windows and glazing in areas that are not routinely accessible to patients, but may occasionally become accessible to patients (e.g. a staff office that is left unlocked, or an office that is later converted to a Consult Room or Bedroom) should also be considered in the Facility Risk Assessment. Windows and glazing that are identified as a risk to patients for the behaviors listed below should be constructed in accordance with this standard and applicable NYS-OMH specification guidelines. The design and installation of the entire window and glazing system must be considered.

Polycarbonate glazing generally provides the best protection for patients against the various risks listed below. Laminated safety glazing, including the safety film covered laminate products identified in this standard, should be used with caution. Glazing products other than polycarbonate or safety film covered laminated safety glazing should never be used in patient areas. The NYS-OMH does not permit the use of wire glass in its facilities.

Note: Before specifying laminated glazing in a window unit, confirm that the selected window system has passed the aforementioned impact testing with the specified laminated glazing.

Elopement

Exterior windows, interior windows, and glazing are a primary target for patients trying to elope. Windows and glazing in both supervised and unsupervised areas provide potential opportunities for patients to elope. It is critical to consider the design of the entire window, together with the installation in wall openings, when designing to prevent elopement. Interior windows must not be discounted as potential targets; patients may perceive such windows as potentially leading to elopement opportunities even where that is not the case.

Jumping

Patients may jump in order to hurt themselves, or may attempt to push others through window openings in order to harm them. Jumping is a concern for all spaces above grade level, that are accessible to patients, whether unsupervised or supervised.

Ingestion

Patients may eat things for a variety of reasons, including a wish to cause themselves personal harm. Polycarbonate or laminated glazing protected with a surface film should always be used in patient accessible areas. Even small fragments that can come from tempered or laminated glazing can cause severe internal injuries or death. When considering using laminated glazing, care must be taken to select glazing that meets the following criteria:

- The safety film covered laminated glazing should wholly resist penetration of the glazing panel.
- The safety film covered laminated glazing should wholly retain broken glass to prevent dislodging from the interlayer, and to prevent all off-sharding of fragments.

(continued on the next page)
Laceration
Patients will cut themselves. Glass presents an obvious opportunity for such behavior. When considering using laminated glazing, care must be taken to select glazing that meets the following criteria:

- The safety film covered laminated glazing should wholly resist the penetration of the glazing panel.
- The safety film covered laminated glazing should wholly retain broken glass to prevent dislodging from the interlayer, and to prevent all off-sharding of fragments.
- The safety film covered laminated glazing should prevent access to the sharp edges of broken glass, even if they are retained on the interlayer.

Weaponization
Patients may use objects in their environment to harm others. Glass presents an obvious opportunity for such behavior. When considering using laminated glazing, care must be taken to select glazing that meets the following criteria:

- The safety film covered laminated glazing should wholly resist the penetration of the glazing panel.
- The safety film covered laminated glazing should wholly retain broken glass to prevent dislodging from the interlayer, and to prevent all off-sharding of fragments.
- The safety film covered laminated glazing should prevent access to the sharp edges of broken glass, even if they are retained on the interlayer.
Division 08 | Openings
Glazing, Exterior Windows, Polycarbonate Glazing

General Notes
Glazing products other than polycarbonate or laminated safety glazing should never be used in patient areas.

Polycarbonate glazing provides the best protection for the patient against the previously listed risks in all patient areas, where the applicable codes and regulatory authority permit the use of polycarbonate glazing.

For applications that require fire rated assemblies, see Fire Protective Rated and Fire Resistive Rated glazing product pages.

Sabic Innovative Plastics
www.sabic.com/en

FOR USE AS INNERMOST PANES OF EXTERIOR WINDOWS

Lexan SL-4855 Polycarbonate Glazing
1/2" thick with Marguard II-UV coating. Specify MR10 with 10 year warranty.

Plaskolite, LLC

Oldcastle Building Envelope
www.oldcastlebe.com

FOR USE AS INNERMOST SURFACE OF EXTERIOR WINDOWS

ArmorProtect Plus 161000 Laminated Security Glazing
3/8” thick. 3M film is scratchable and may be removed from the laminated glass panel and new film installed by trained maintenance staff. Curing time for the film installation is two weeks minimum. Maintenance staff should be advised to keep spare stock that is fully cured to eliminate down time. Install in frames with a 1” continuous edge bite if dry glazed or 1/2” continuous edge bite if silicone glazed.

Outer Layer:
5/32” heat-strengthened glass
Interlayer:
0.090” Dupont SentryGlas Plus
Inner Layer:
5/32” heat-strengthened glass
Film over Inner Layer:
3M Ultra S800 anti-spall film installed to edge of glass (see Film Pages for equivalents)

Caution: Wet-glazing compounds and cleaning agents have been known to compromise the integrity of the interlayer, and care should be taken with their use. Care should be taken to properly identify the inside face of the glazing and to handle it according to manufacturers’ instructions.

Oldcastle Building Envelope
www.oldcastlebe.com

FOR USE AS OUTERMOST SURFACE OF EXTERIOR WINDOWS

Laminated Security Glazing
3/8” thick. Intended for use at grade, courtyards or porches with supervised patient access as an exterior lite in an insulated glazing unit where either 1/2” polycarbonate or 3/8” ArmorProtect Plus 161000 already provides primary patient safety from inside the building.

Outer Layer:
3/16” heat-strengthened glass
Interlayer:
0.060” PVB interlayer
Inner Layer:
3/16” heat-strengthened glass

Caution: Do not use in any area where patients may be left unsupervised.
Division 08 | Openings
Glazing, Exterior Windows, Security Film

General Notes
Films are used on the interior face of exterior glazing, and only when the use of polycarbonate is impractical or where its use is prohibited by Code when a fire resistance rating is required.

Anti-spall films are intended to be applied to conventional glazing materials to prevent release of shards in the event of breakage or other failure. Films may help prevent off-sharding, laceration, weaponizing, and ingestion. Anti-spall films may provide a cost-effective safety improvement for pre-existing conventional glazing materials.

Each facility shall conduct their own Facility Risk Assessment to determine the appropriateness of film applications for use in their specific situations.

Performance Criteria
Extend film to edge of glazing beyond and under the face of the glazing bead/stop.

Caution Notes
- Films shall not be used in NYS-OMH facilities to prevent elopement,
- Films shall not be used in NYS-OMH facilities to prevent jumping from upper stories,
- Films shall not be used in NYS-OMH facilities for security use at exterior glazing facing non-secure open spaces.

Ace Security Laminates
www.usace.com

200 Series - Standard Security
0.009” thick, 2-ply laminate, 99% UV blocking for use on exterior windows. Lifetime warranty.

Madico
www.safetyshield.com

Safetyshield 1500 Film
High strength glazing film applied to the exposed surface of glass reduces glass breakage and holds broken glass in place until glazing can be replaced.
General Notes
Glazing products other than polycarbonate or laminated safety glazing should never be used in patient areas.

Laminated safety glazing should be used with caution.

1/2” polycarbonate is recommended where elopement or jumping are the risks to be mitigated.

3/8” polycarbonate is recommended where ingesting, laceration, and weaponization are the risks to be mitigated.

Sabic Innovative Plastics
www.sabic.com/en

Lexan SL-4855 Polycarbonate Glazing
3/8” or 1/2” thick with Marguard II-UV coating. Specify MR10 with a 10 year warranty. Install in hollow metal frames with a 1” continuous edge bite, or deeper based on size/width of interior window opening.

SaftiFirst
www.safti.com

SuperLite Fire Rated Glazing
1/4” monolithic safety and positive pressure fire rated glazing. For use in wood, hollow metal, aluminum or any equally fire rated framing systems.

Traditional fire rated glass with a tough, durable fire rated safety film applied to meet the highest impact safety standard, CPSC 16CFR 1201 Cat. II, which requires withstanding 400 ft. lbs. due to accidental impact.

Notes:
- These products are rejected because of breakage and shard production.
- These products are not tested per ASTM F1233 and therefore are not considered Security Glazing.
- Impact safety ratings do not equal security ratings.
- While these products have many applications as Safety Impact Glazing, such as in schools and public buildings, they are not intended for special populations where security is also required.
General Notes
Do not use wire glazing.

Existing wire glazing should be removed and replaced with approved safety glazing wherever possible, or it should be protected with either an applied safety film or 1/8” polycarbonate over face of glazing.

Code Notes
Fire resistive glazing is tested per ASTM E-119, NFPA 251, UL 263

Verify usage compliant with applicable Codes.

Technical Glass Products
www.fireglass.com

Pilkington Pyrostop
3/4” Pyrostop fire rated, impact safety rated glass sandwiched between two layers of 1/8” polycarbonate.
General Notes
This Performance Based System may be applicable and acceptable in certain situations. Verify Code requirements and verify System acceptability with AHJ prior to executing design:

where the authority having jurisdiction will accept NYS-OMH’s Southwest Research Institute test (SwRI 01-4779) (not tested per ASTM F1233)

Polycarbonate Protected by Closely Spaced Sprinklers
For up to 120 minute opening protection:
• 3/8” polycarbonate
• Closely spaced (6’ O.C. max) sprinklerheads on both sides of glazing.
• Rated HM frame with 5/8” stops
Installation Notes
Install glazing in a hollow metal frame with glazing stops that provide a 5/8” continuous edge bite.

Plaskolite, Inc.

Doors, Secure Wood Door

General Notes
The door can be prepped for anti-barricade. Refer to the anti-barricade strategy section listed at the beginning of this document for additional information.

Installation Notes
Reinforcement of stud wall construction is required to adequately support the door and resist dynamic impact upon closing.

Ambico
www.ambico.com

Ambico Security Wood Door

High Security non-rated, 14 gauge steel core with wood veneer door.

14 gauge stiffened galvanized steel core with 14 gauge galvanized steel sheets each side, with MDF and wood veneer face sheets applied. Highly vandal, tamper, and impact resistant.

Wood stiles and rails are 3/8” hardwood to match face veneer species.

Doors are insulated for sound attenuation.
Installation Notes
Access door frames shall be 16 gauge steel. Access door shall be 20 gauge steel, welded pan type. Door flange shall be 1” wide minimum, for embedment in drywall compound. Hinges shall be continuous. Base metal shall be steel with primer coat of rust inhibitive electrostatic powder baked gray enamel or stainless steel.

The access door may be filled with fire rated insulation. The door shall be automatic closing, self-latching and contain an interior latch release.

Locks shall be mortise slam latch with keyed cylinder. All locks shall be keyed alike.

Caution Notes
All access doors inherently carry ligature risk. Avoid the use of access doors in patient areas to the greatest extent possible, particularly in unsupervised areas such as patient bedrooms and bathrooms.

Cendrex

FDWB Fire Rated Access Panel
Wall Assemblies

The Designer should determine walls that are required to have an STC rating by the applicable codes, regulations, and the Joint Commission. See OMH Design Standards for application of OMH Wall Assemblies.

OMH Wall Assembly 1: 3-5/8" 25 ga actual or EQ (20 ga actual or EQ at single sided walls/plumbing chase) steel studs @ 16" oc. 1 layer 5/8" standard drywall. Refer to other wall assemblies for opposite side wall materials.

- Provide Type-X or Type-C drywall where part of a rated assembly (UL U419).
- Provide water and mold resistant (Green board or Type-M) drywall at locations exposed to moisture (bathrooms, showers, kitchens, dishwashing, pools) regardless of whether a waterproofing and reinforcing membrane system (i.e. Schluter) is provided.
- Provide 3-1/2" fiberglass batt insulation where required for acoustical separation.
- Provide fire treated wood blocking where required for anchoring items to wall.
- Designer to specify height of wall (to above ceiling or underside of deck) based on code requirement, security, structure, and ceiling type.

OMH Wall Assembly 2.1: 3-5/8" 20 ga. (actual, not EQ) steel studs @ 16" oc. 1 layer 5/8" VHI Mold drywall each side. (see OMH Gypsum Board Assemblies Specification Guideline Section 09 21 16). Refer to other wall assemblies for opposite side wall materials.

- Provide 3-1/2" fiberglass batt insulation where required for acoustical separation.
- Provide fire treated wood blocking where required for anchoring items to wall.
- Designer to specify height of wall (to above ceiling or underside of deck) based on code requirement, security, structure, and ceiling type.
- Refer to OMH Gypsum Board Assemblies Specification Guideline (Section 09 21 16) and manufacturer’s specifications for locations where Level 5 finishing of abuse resistant drywall may be necessary.

OMH Wall Assembly 2.2: 3-5/8" 20 ga. (actual, not EQ) steel studs @ 16" oc. Floor to 4’ aff: 2 layers 5/8” VHI Mold Tough or single layer with protective wainscoting finish material. 4’ aff to ceiling: 1 layer 5/8” VHI Mold Tough, additional base layer 5/8” standard drywall if needed for uniform drywall thickness (see OMH Gypsum Board Assemblies Specification Guideline Section 09 21 16). Refer to other wall assemblies for opposite side wall materials.

- Provide Type-X or Type-C drywall where part of a rated assembly (UL U419).
- Provide 3-1/2" fiberglass batt insulation where required for acoustical separation.
- Provide fire treated wood blocking where required for anchoring items to wall.
- Designer to specify height of wall (to above ceiling or underside of deck) based on code requirement, security, structure, and ceiling type.
- Refer to OMH Gypsum Board Assemblies Specification Guideline (Section 09 21 16) and manufacturer’s specifications for locations where Level 5 finishing of abuse resistant drywall may be necessary.

OMH Wall Assembly 3: 3-5/8” 20 ga. (actual or EQ) steel studs @ 16” oc. 1 layer 5/8” Type X drywall. Provide 3-1/2" fiberglass batt insulation. Protection padding system (see OMH Specification Guideline Section 13 99 99). Refer to other wall assemblies for opposite side wall materials.

- See IBC Table 509 Incidental use areas “I-2 patient rooms with padding”. AHJ may or may not consider seclusion rooms as “patient rooms”. Where a suite configuration is provided, rating the perimeter of the suite may be the most constructable solution. Where the functional program dictates an independent seclusion room configuration directly off a corridor without an ante room, a variance for the rating may be required. Consult OMH project manager for precedent variances on file.

Division 09 | Finishes
Wall Assemblies, General

OMH Wall Assembly 4.1: 3-5/8” 20 ga. actual or EQ steel studs @ 16” oc. 1 layer 5/8” abuse resistant glass mat water-resistant backing board (i.e. GP DensArmor Plus Abuse Resistant (see OMH Specification Guideline Section 09 21 16). Reinforcing and waterproofing membrane (i.e. Schluter), see OMH Specification Guideline Section 09 30 13). Refer to other wall assemblies for opposite side wall materials.

- This Assembly is intended as a base for ceramic or porcelain tile installed with a waterproofing and reinforcing membrane system (i.e. Schluter). Refer to OMH Specification Guideline Section 09 30 13.
- Provide Type-X abuse resistant panels or additional layer(s) of Type-X or Type-C drywall between backer board and studs where part of a rated assembly (UL U419).
- Provide 3-1/2” fiberglass batt insulation where required for acoustical separation.
- Provide fire treated wood blocking where required for anchoring items to wall.
- Designer to specify height of wall (to above ceiling or underside of deck) based on code requirement, security, structure, and ceiling type.

OMH Wall Assembly 4.2: 3-5/8” 25 ga. actual or EQ (20 ga at single sided walls/plumbing chase) steel studs @ 16” oc. 1 layer 5/8” glass mat water-resistant backing board (i.e. GP DensArmor Plus, see OMH Specification Guideline Section 09 21 16). Refer to other wall assemblies for opposite side wall materials.

- This Assembly is intended as a base for ceramic or porcelain tile installed with a waterproofing and reinforcing membrane system (i.e. Schluter). Refer to OMH Specification Guideline Section 09 30 13.
- Provide Type-X abuse resistant panels or additional layer(s) of Type-X or Type-C drywall between backer board and studs where part of a rated assembly (UL U419).
- Provide 3-1/2” fiberglass batt insulation where required for acoustical separation.
- Provide fire treated wood blocking where required for anchoring items to wall.
- Designer to specify height of wall (to above ceiling or underside of deck) based on code requirement, security, structure, and ceiling type.

OMH Wall Assembly 5: Concrete masonry
- CMU type, thickness, and reinforcing selected by designer.
- Refer to UL U-Series designs where fire resistance ratings are required.
Ceiling Assemblies

The Designer should determine ceilings that are required to have an STC rating or Special Acoustic properties. Ceiling heights should be evaluated based on patient population and risk levels. Frequent accessibility to MEP items above the ceiling and vulnerability to access door should be considered when selecting a ceiling system. See OMH Design Standards for application of OMH Ceiling Assemblies.

OMH Ceiling Assembly 1: 1 layer 5/8" drywall. Metal framing.
- Provide Type-X or Type-C drywall where part of a rated assembly.
- Provide water resistant (Green board or Type-M) drywall at locations exposed to moisture (bathrooms, showers, kitchens, dish washing).
- Design metal framing and hangers to accommodate ceiling weight.

OMH Ceiling Assembly 2: 1 layer 5/8” abuse resistant drywall. Metal framing.
- Provide Type-X or Type-C abuse resistant drywall where part of a rated assembly.
- Design metal framing and hangers to accommodate ceiling weight.
- Access doors are necessary where required and may create a ligature issue.

OMH Ceiling Assembly 3: 3/4” suspended acoustic ceiling tile (fiberglass, mineral fiber or perforated aluminum). Intermediate duty suspension system.
- This is a non-fire rated ceiling system.
- Washable/water resistant panel to be used in food preparation areas, Kitchens, Pantries, and Dining Rooms.
- Do not use hold down clips, especially in any patient areas. Instead use an alternate Ceiling Assembly.
- Do not use loose batt insulation above ceilings to achieve acoustical separation between spaces.
- Consider use of perforated metal ceiling tiles. While an increased cost, they offer better acoustics and resistance to damage.

OMH Ceiling Assembly 4: Class A Fiberglass Reinforced Plastic (FRP) (Kemlite) ceiling panel. FRP suspension system (Kemlite Sanigrid II) with 12 ga. stainless steel hanger wire.
- This is a non-fire rated ceiling system.
- Select ceiling panel material based on code and surface finish requirements.

OMH Ceiling Assembly 5: Security type metal tile or plank system. Product specific security type suspension system braced to deck above and restrained at full perimeter with proprietary ceiling panels offering varying levels of abuse resistance and plenum access using special tools.

OMH Ceiling Assembly 6: Tectum panels. Continuous steel reinforced, corridor span panels with tegular edges and concealed suspension components.
- Verify Tectum availability with manufacturers. Armstrong Industries manufactures 1”ceiling tiles and 2” panels not suitable for this Assembly application. Condeck Corp. (NM) and Tectum, Inc. (OH) are resources for plank products with tegular steel channel reinforcing suitable for this assembly but primarily intended as roof deck materials.
- Plank products when properly detailed and installed do not offer above ceiling access. Access doors are necessary where required and may create a ligature issue.
Division 09 | Finishes
Wall Base

General Notes
Use only heat welded integral cove base, solid wood or pre-finished rubber/PVC base.

Installation Notes
Integral Cove Base: Adhere base to wall. Provide tamper-resistant sealant along the top edge of base.

Wood and rubber Wall Base: Adhere and mechanically fasten base to wall. Fasteners shall be screwed into wood blocking, countersunk and filled.

Caution Notes
Do not specify conventional commercial vinyl or rubber wall base in patient areas. These products are easily removable, presenting risk of weaponization.

Custom Wood Base

Custom Designed Wood Base
Solid 3/4" hardwood with eased or bullnose top and corners. Provide tamper-resistant sealant at joint between floor and base, base and wall surface. Finish six sides of all wood base prior to installation.

Johnsonite
www.johnsonite.com

Millwork Contoured Wall Base
Thermoplastic solid rubber base. Various profiles range in height from 2-1/2” to 6” high, 1/4” to 3/8” thick.
Division 09 | Finishes
Wall Base

General Notes
Use only heat welded integral cove base, solid wood or pre-finished rubber/PVC base.

Installation Notes
Integral Cove Base: Adhere base to wall. Provide tamper-resistant sealant along the top edge of base.

Wood and rubber Wall Base: Adhere and mechanically fasten base to wall. Fasteners shall be screwed into wood blocking, countersunk and filled.

Caution Notes
Do not specify conventional commercial vinyl or rubber wall base in patient areas. These products are easily removable, presenting risk of weaponization.

Flexco
www.flexcofloors.com

Health Design Wall Base
Thermoplastic rubber base tapers from 1/8" thick to adjacent floor thickness. All seams are heat welded.

Johnsonite
www.johnsonite.com

SCC-XX-A Cove Cap Moulding
Vinyl cove cap molding accessory for 1/8" cove base material.

Note: Material can be pulled out of place in installation and weaponized.
General Notes
Security ceiling panels are removable with use of special tools to remove ceiling panels.

Installation Notes
Coordination is required between security ceiling systems and installation of any devices and fixtures that penetrate the ceiling plane.

Specifier shall select steel or aluminum gauge or aluminum based on finished ceiling heights and risk levels of installation areas.

Gordon Incorporated
www.gordon-inc.com

WinLok Accessible Soffit System

0.050" aluminum 30" x 30" panels (perforation pattern R564-732DG10 with 1/2" non-perforated borders at each panel) and manufacturer's standard system suspension grid and WA-20 2" x 2" extruded perimeter angle and AV3 panel hold-down angle at perimeter. All exposed finishes powder-coated after perforations.

OMH Ceiling Assembly: 5b (page 86)

Gordon Incorporated
www.gordon-inc.com

Cel Line Metal Plank Security Ceilings

14 GA. 2' wide galvanized steel panels (perforation pattern R18-1132DG11) and manufacturer's 14 GA galvanized steel perimeter angle. Panels surface-screwed to perimeter angle @ 6" o.c. All exposed finishes powder-coated after all perforations. Back side of panels powder-coated. 2' x 2' access door installed in ceiling.

OMH Ceiling Assembly: 6 (page 86)
General Notes
Security ceiling panels are removable with use of special tools to remove ceiling panels.

Installation Notes
Coordination is required between security ceiling systems and installation of any devices and fixtures that penetrate the ceiling plane.

Specifier shall select steel or aluminum gauge or aluminum based on finished ceiling heights and risk levels of installation areas.

Gordon Incorporated
www.gordon-inc.com

Lockdown Metal Panel Security Ceiling
18 GA. 2' x 2" galvanized steel "lockdown" panels (perforation pattern R564-732DG10) and manufacturer's perimeter channel with 24 GA z-hold down. Grid system comprised of main tees at 12'-0" o.c. with cross tees at 4'-0" and 2'-0" o.c. Lockdown infill panels pressure fit into grid. All exposed finishes powder-coated after all perforations are cut into panel.

Access door options include hinged door and 2' x 2' access door surface mounted to grid with tamper resistant screws. Frequent removal of tamper resistant screws may compromise the installed ceiling assembly due to wear on the screw threads and to the ceiling grid. Project team should review access requirements w/ owner to determine frequency of access door use and the best method for access.

OMH Ceiling Assembly: 5b (page 86)
General Notes
Users shall perform a risk assessment to determine their options for shower and privacy curtains.

Specify breathable fabric material for shower and privacy curtains.

Installation Notes
Recessed ceiling track shall run continuously between walls. Surface-mounted ceiling track shall run continuously between walls, or be installed with secure end caps. Fill all joints between sections of track with tamper-resistant sealant to reduce opportunities for ligature.

Caution Notes
- End caps can create opportunity for a wedge ligature.
- A looping point can be created in curtain tracks when an object, such as a penny, is inserted into the track.
- The breakaway weight for curtain carriers may exceed the limits at which self-harm can be induced. Carriers can be ganged together to increase the release weight.
- Track system may be weaponized if subjected to severe abuse and dismantled.

InPro Corporation
www.inprocorp.com

Clickeze Ultra Cubicle Track
Extruded aluminum track provides heavy duty strength. For use with Clickeze accessories.

Clickeze Whisper Cubicle Track
Extruded PVC track allows for noise reduction during curtain movement. For use with Clickeze accessories.

Caution: Potential looping point at curtain tracks.
General Notes
Users shall perform a risk assessment to determine their options for shower and privacy curtains.

Specify breathable fabric material for shower and privacy curtains.

Installation Notes
Recessed ceiling track shall run continuously between walls. Surface-mounted ceiling track shall run continuously between walls, or be installed with secure end caps. Fill all joints between sections of track with tamper-resistant sealant to reduce opportunities for ligature.

Caution Notes
- End caps can create opportunity for a wedge ligature.
- A looping point can be created in curtain tracks when an object, such as a penny, is inserted into the track.
- The breakaway weight for curtain carriers may exceed the limits at which self-harm can be induced. Carriers can be ganged together to increase the release weight.
- Track system may be weaponized if subjected to severe abuse and dismantled.

Oddball Industries
www.oddballindustries.com

HealSafe Interiors J-Trac Curtain Rail SP-2 (Wall Mount or Ceiling Mount)
Hook on carrier is designed to clip onto the J-Trac curtain rail and releases from track when downward pressure is applied. The curtain rail can be ceiling or wall-mounted.

Caution: A wall-mounted installation can hold a downward ligature of 20lbs. when several hooks are ganged together.

Construction Specialties, Inc.
www.c-sgroup.com

Breakaway Carrier #975P
Hook on carrier is designed to pop out of the axle when approximately 22 lbs. of pressure is applied to the hook, and can be reused.

Handrails & Grab Bars, General

General Notes
Nearly all handrails and grab bars are subject to possible wedge ligature with a shoe or other object.

Grab bars should only be installed where required by code.

Installation Notes
Verify that all handrails and grab bars are installed per the manufacturer’s installation instructions. Proper installation is critical in order for tight tolerances between the multiple product pieces.

Sealant may be required to fill voids around the perimeter of handrails and grab bars depending on installation substrate.

Caution Notes
Traditional code compliant handrails and grab bars create obvious ligature opportunities.
Division 10 | Specialties
Handrails

General Notes
All handrails are subject to possible wedge ligature with a shoe or other object.

Installation Notes
Verify that all handrails are installed per the manufacturer’s installation instructions. Proper installation is critical in order for tight tolerances between the multiple product pieces.

Sealant may be required to fill voids around the perimeter of handrails and grab bars depending on installation substrate.

Additional Notes
The inside of handrails with continuous mounting brackets are susceptible to the collection of debris.

Caution Notes
Traditional code compliant handrails create obvious ligature opportunities.

InPro Corporation
www.inprocorp.com

1000BH Handrail
Continuous aluminum retainer bracket and specially designed molded returns reduce the gap between the handrail and substrate.

Notes:
- Cover shall be installed using tamper-resistant sealant, as recommended by manufacturer, to reduce risk of removal.
- Corner pieces are not available with this handrail system.

Wallguard
www.wallguard.com

2021S Handrail
5-1/2” high, 12’-0” continuous security bracket and mounting system. Class A fire rating and ADA compliant. Provide manufacturer’s continuous aluminum tube with laser cut 1/8” thick aluminum closure plates at corners and mechanically fastened. Colored cover shall be installed with 3M Fastbond 30 water based contact adhesive to prevent removal.

Caution: Cover is easily removable and can be broken or weaponized.
General Notes
Many grab bars are subject to possible wedge ligature with a shoe or other object. Grab bars should only be installed where required by code.

Installation Notes
Verify that all grab bars are installed per the manufacturer’s installation instructions. Proper installation is critical in order for tight tolerances between the multiple product pieces.

Provide continuous blocking. Be attentive to potential moment arm issues on existing installations without continuous blocking.

Coordinate location of grab bars with concealed flushometer access panels.

Sealant may be required to fill voids around the perimeter of grab bars depending on the installation substrate.

Additional Notes
Specialty grab bars may be handed in only one direction when installed vertically.

Caution Notes
- Traditional code compliant grab bars create obvious ligature opportunities.
- ICRA notes potential infection control problem at end closure plates.
- Drainage holes at end caps create potential ligature opportunities with paper clips.

Behavioral Safety Products
www.besafeprod.com

GB730 Ligature-Resistant Grab Bar
Symmetrical (non-handed) design allows for mounting the grab bar in any direction; vertical, horizontal, or pitched installations.

Notes:
- Water drains off open end of grab bar and will result in water on the bathroom floor if configured incorrectly.

Kingsway Group
www.kingswaygroupusa.com

Grab Rail 270 Series
Horizontal and vertical mounting. Painted extruded aluminum, 600 mm long.

Provide sealant at the full perimeter to prevent end to end looping.

Notes:
- Include “G” after model number when ordering to ensure that the required graspable length is provided.
- Water drains off open end of grab bar and will result in water on the bathroom floor if configured incorrectly.

General Notes

Some product categories offer few patient safe solutions that have been approved for use in NYS-OMH facilities. One such category is toilet accessories. Many manufacturers of soap dispensers, paper towel dispensers, hand dryers, and toilet tissue dispensers/holders market their products as appropriate for use in high risk environments. Upon testing many products, NYS-OMH has determined that they often present opportunities for self-harm.

Failure Modes

Because these product types dispense disposable products, many of them make use of slots or holes. This allows for wedging and tying, providing opportunities for downward ligature. Hand dryers inherently present risk, as they rely on unobstructed airflow to function. Hand dryers that have been accepted by OMH dispense and exhaust air as inconspicuously as possible, and resist looping over the top of the device.

Infection Control

There exist some inherent problems with options that present a patient safe solution, one of which is risk of infection. Paper towel and toilet tissue shelves and holders which do not secure the disposable products allow it to fall on the floor, rendering it contaminated. Users cannot be prevented from using the contaminated products; this leads many facilities to disallow the use of shelves and holders.

Best In Class

It is the responsibility of each facility to determine, based on their own risk assessment, how best to address these needs. Some options in this Standard will appeal more than others based on past experience and knowledge of a particular patient population. The decision to utilize a product noted as “Rejected” or “Use with Caution” may in fact be the best solution for a facility, provided that it understands the risks involved and has a plan to manage those risks as best as possible.
Division 10 | Specialties
Toilet Accessories, Soap Dispensers

General Notes
Best practice advocates the use of recessed toilet accessories.

Performance Criteria
Quality control of toilet accessories is important and often difficult to control. Samples should be requested as part of the submittal process.

Window Treatments

General Notes
Users shall perform a risk assessment to determine their options for shower and privacy curtains.

Specify breathable fabric material for shower and privacy curtains.

Installation Notes
Recessed ceiling track shall run continuously between walls. Surface-mounted ceiling track shall run continuously between walls, or be installed with secure end caps. Fill all joints between sections of track with tamper-resistant sealant to reduce opportunities for ligature.

Caution Notes
- End caps can create opportunity for a wedge ligature.
- A looping point can be created in curtain tracks when an object, such as a penny, is inserted into the track.
- The breakaway weight for curtain carriers may exceed the limits at which self-harm can be induced. Carriers can be ganged together to increase the release weight.
- Track system may be weaponized if subjected to severe abuse and dismantled.

InPro Corporation

www.inprocorp.com

Clickeze Ultra Cubicle Track
Extruded aluminum track provides heavy-duty strength. For use with Clickeze accessories.

Clickeze Whisper Cubicle Track
Extruded PVC track allows for noise reduction during curtain movement. For use with Clickeze accessories.

InPro Corporation

www.inprocorp.com

Clickeze Pop Out Carrier
Hook on carrier releases, allowing the curtain to fall, and disengages at approximately 10 lbs. of pressure. For use with both Clickeze Ultra and Whisper Curtain Tracks.

Caution: Potential looping point at curtain tracks.
General Notes
Users shall perform a risk assessment to determine their options for shower and privacy curtains.

Specify breathable fabric material for shower and privacy curtains.

Installation Notes
Recessed ceiling track shall run continuously between walls. Surface-mounted ceiling track shall run continuously between walls, or be installed with secure end caps. Fill all joints between sections of track with tamper-resistant sealant to reduce opportunities for ligature.

Flxsigs

Note: The Flxsign is highly susceptible to vandalism and can potentially be used as a weapon.
Division 10 | Specialties
Fire Extinguisher Cabinets

General Notes
Locate only in supervised areas.

Installation Notes
See NYS-OMH Guidelines for strategies to maintain wall assembly fire ratings at recessed cabinets.

Code Notes
NFPA 10 requires locking fire extinguisher cabinets to include a “means of emergency access”. Manufacturers interpret this in various ways, including:

- Full lock with staff assigned keys.
- Break-away latch/lock with resettable tongue.
- Break-away latch/lock with non-resettable tongue.

Carefully review non-resettable products before specifying, as actual damage may be caused to the latch/lock mechanism during emergency access. Repair may be simple or complex depending on the specific product.

Caution Notes
Fire extinguisher cabinets are tested primarily for abuse-resistance and may be loopable at cabinet/door joint.

Larsen’s Manufacturing Company
www.larsensmfg.com

Architectural Series 2712 Fire Extinguisher Cabinet
Stainless steel tub with a continuous hinge. Specify fully recessed cabinet with flat trim, or semi-recessed cabinet with rolled edge trim & door without handle. Specify mortise lock with keyed cylinder.

Larsen’s Manufacturing Company

DECS 2409-R4 Fire Extinguisher Cabinet

JL Industries Cosmopolitan Series Fire Extinguisher Cabinet
Note: Cabinet quality is not abuse or tamper-resistant and presents many sharp edges.
Division 10 | Specialties
Wall Device Covers

ARSCO Manufacturing Co.
www.arscomfg.com

Anti-ligature Thermostat Cover with Lock ACM0001-01A

Caution: Provide tamper-resistant sealant at full perimeter of device.
General Notes

Furniture with doors and drawers, such as wardrobes and dressers, will pose a potential ligature risk. Since there are no viable ligature-resistant solutions, it is highly recommended that doors and drawers are not provided for wardrobes, dressers, closet units, etc. unless their use is regulated by staff controlled locks. When considering if the use of wardrobes, dressers or closet units is desired or appropriate, best practice requires each new facility to complete a risk assessment for all spaces and furnishings. Patient privacy rights may also inform decisions about the need for specific furnishings.

Doors & Drawers Guidelines

- Provide locks for all doors and drawers, allowing staff to control access by at-risk patients when necessary.
- Provide doors with continuous hinges and hospital tips.
- Provide doors with recessed ligature-resistant finger pulls. If available, continuous integral finger pulls can also be provided.
- Provide drawers with recessed ligature-resistant finger pulls, stops, and locks.
- For high risk patients, consider the use of built-in closets with door top ligature sensors.

Wardrobe & Closet Unit Guidelines

- Recess wardrobes and closet units, or make continuous to underside of ceilings or soffits above.
- When it’s not possible to make recessed units or make them continuous to underside of ceilings or soffits above, provide sloped tops.
- Provide collapsible coat hooks. Closet rods and j-bars are not acceptable.
- Requirements of the 2018 FGI Guidelines state: “Shelves for folded garments shall be used instead of arrangements for hanging garments.”

Platform Bed Guidelines

- NYS-OMH has the following platform bed requirements:
- Beds must be platform type with flush side panels, headboards and footboards, with no overlapping lips between members.
- Platform beds shall be six-sided and have an enclosed bottom, or be five-sided and bolted to the floor.
- Provide solid wood or 3/4” plywood panels with veneer. Particleboard and plastic laminate are not acceptable.
- All wood members, both exposed and internal, shall be sealed with three layers of polyurethane.
- Internal construction shall consist of at least two intermediate supports. Acceptable support materials are wood and metal.
- All top and edge joints shall be sealed with tamper-resistant sealant.
- Provide no exposed fasteners, except when fastening bed to the floor.
- Glides and adjustable feet are not acceptable. Felt pads only.
- Exercise caution with platform beds that have restraints. These should be removed in all patient rooms unless one-on-one supervision is provided.
- Each facility must perform their own risk assessment to evaluate all products.

Manufacturers must be able to customize their bed construction to comply with all NYS-OMH platform bed requirements. Beds that do not comply will be rejected by NYS-OMH.
Division 21 | Fire Suppression
Sprinklers

General Notes
Minimize removable parts.

Installation Notes
Specify no accessible parts that activate the sprinkler system when vandalized.

Tyco Fire Protection Products
www.tyco-fire.com

Raven Institutional Sprinklers
Pendant and horizontal sidewall heads. Standard, Quick Response & Extended Coverage. Stainless steel escutcheons available for installation in wet or damp areas.

Caution: Protective center cap can be removed upon severe tampering. Once removed, sprinkler head is susceptible to looping ligature.

Tyco Fire Protection Products
www.tyco-fire.com

Model TFP PH2 Sprinklers

Reliable Automatic Sprinkler Co., Inc.
www.reliablesprinkler.com

Model XL Quick Response Institutional Sprinkler

Cautions:
- A portion of the sprinkler head projects below the sprinkler head enclosure and is accessible to patients; tampering may activate sprinkler.
- Removable parts create a potential safety hazard for ingestion and weaponization.
- Break away weight is 50 lbs. and exceeds recommended.
Division 21 | Fire Suppression
Sprinklers

General Notes
Minimize removable parts.

Installation Notes
Specify no accessible parts that activate the sprinkler system when vandalized.

Viking Group Inc.
www.vikinggroupinc.com

VK410 Pendant & VK412 Sidewall Institutional Flush Sprinklers

Note: The heat sensor projects below the sprinkler head enclosure and is accessible to patients. Damage to the heat sensor activates the system.
Division 22 | Plumbing
Lavatory Assemblies, General

General Notes

Lavatories in the following section are specified as systems. Individual components, used either independently of the system they are specified with, or combined with other systems, may not be ligature-resistant. Specifiers should take care to utilize products in concert to create systems that are safe for installation condition (e.g. in a niche as opposed to freestanding) and combinations of components that make a functional and safe system. These components include:

- Activators & Actuators
- Basins
- Countertops
- Faucets
- Fixtures
- Mirrors
- Niche Lavatories
- Pipe Enclosures

Ligature

Only fixed strainers should be used. Do not use pop-up drains. Care should be taken to specify ligature-resistant strainers.

Appearance

Facilities are encouraged to utilize lavatories and toilets made of materials other than stainless steel that support a therapeutic environment. If stainless steel fixtures are preferred by a facility, they should be specified with a powder coated finish.
Code Notes
Provide ADA compliant handicapped accessible lavatory assembly configurations where required.

NYS-OMH Standard Lavatory Assembly

Custom Solid Surface Lavatory with Integral Sink Bowl & Pipe Enclosure
Niche mounted solid surface vanity counter with integral solid surface sink bowl and deck mounted ligature-resistant faucet. Removable integral solid surface pipe enclosure below mounted with tamper-resistant fasteners. Provide lavatory basin without overflow.
Code Notes
Provide ADA compliant handicapped accessible lavatory assembly configurations where required.

American Standard
www.americanstandard-us.com
Lucerne 0355.012
Wall hung, vitreous china sink.

Note: A pipe enclosure, complying with ANSI 117.1, is required with this wall hung sink to conceal exposed plumbing piping.

Caution: A difficult but possible ligature opportunity may exist with this product. A series of shoelaces tied together may be looped over the lavatory and pulled back toward the support wall under the pipe enclosure.

Behavioral Safety Products
www.besafeprod.com
Ligature-Resistant Solid Surface Lavatory #ET720
Shown with pipe enclosure, which comes standard, and deck-mounted dual-temp push-button faucet, sold separately.

Caution: A difficult but possible ligature opportunity exists with this product. A series of shoelaces tied together may be looped over the lavatory and pulled back toward the support wall under the pipe enclosure.
Division 22 | Plumbing
Lavatory Assemblies

Code Notes
Provide ADA compliant handicapped accessible lavatory assembly configurations where required.

Whitehall Manufacturing
www.whitehallmfg.com

WH3775 Solid Surface Wall-Hung Lavatory

Shown with fully accessible powder-coated stainless steel pipe enclosure, deck-mounted dual-temp push-button conical faucet.

Available without overflow hole.

Cautions:
• Provide tamper-resistant sealant at joint between underside of lavatory and top edge of pipe enclosure.
• A difficult but possible ligature opportunity may exist with this product. A series of shoelaces tied together may be looped over the lavatory and pulled back toward the support wall under the pipe enclosure.
General Notes
Solid surface integral, countertop mounted and undermount lavatories are all acceptable when part of an assembly that is itself designed to be non-loopable.

Code Notes
Provide ADA compliant handicapped accessible lavatory assembly configurations where required.

American Standard
www.americanstandard-us.com

Rondalyn Countertop Sink
High gloss stain resistant vitreous china sink. Specify without overflow.

American Standard
www.americanstandard-us.com

Mezzo Semi-Countertop Sink
Self rimming fine fire clay semi-countertop sink. Specify without overflow.
Division 22 | Plumbing
Lavatory Pipe Enclosures

General Notes
Custom fabrications can be viable alternatives and, when properly detailed, may be preferable to pre-manufactured enclosures.

Installation Notes
Specify tamper-resistant fasteners.

IPS Corporation
www.ipscorp.com

Truebro Lav Shield Model #2018

Cautions:
- Pipe enclosure will conceal exposed plumbing piping, but is used with wall-mounted lavatory that poses looping opportunity.
- Careful scribing to underside of lavatory is required for a proper fit and sealant joint.
- Coordinate model of enclosure with model of wall-mounted lavatory.
Division 22 | Plumbing
Lavatory Faucets

General Notes
Faucets must be considered as part of the entire assembly.

Installation Notes
Specify projecting spouts only when the lavatory is positioned so that the lateral ligature hang is not possible (i.e. recessed in a niche).

Behavioral Safety Products
www.besafeprod.com

SF400 Ligature-Resistant Sensor Faucet
Deck mounted faucet is a single temperature faucet without controls. It may be specified as hard-wired or with battery power.

Deck mounted conical faucet. Specify one of the following, with appropriate control valve assembly.
WH3376 - Single temperature with pneumatic pushbutton
WH3377 - Dual temperature with pneumatic pushbutton
WH3376-PPZ - Single temp with Piezo touch button
WH3377-PPZ - Dual temp with Piezo touch buttons.
Division 22 | Plumbing
Lavatory Faucets

General Notes
Faucets must be considered as part of the entire assembly.

Installation Notes
Specify projecting spouts only when the lavatory is positioned so that the lateral ligature hang is not possible (i.e. recessed in a niche).

Kohler Co.
www.kohler.com

K-922 Laminar Faucet

Note: This product’s recess presents opportunity for wedge ligature.
Division 22 | Plumbing
Lavatory Grid Strainers

Installation Notes
Coordinate plumbing fitting and piping length associated with drains to ensure fit in pipe enclosures.

Oddball Industries
www.oddballindustries.com

SP-11-GDK Grid Drain Kit
Effective drainage is achieved only with the included air vent. Air introduction valve may not meet all local codes.

Caution: Although drainage holes are half the diameter as typical grid strainers, making threading of a thin ligature difficult, a paper clip can be woven through the perforations creating a tie off opportunity.

Typical Grid Strainer & Drain
Note: Typical grid strainers are rejected because ligature can be created by threading a ligature item through the perforations and be hung over the lavatory or vanity edge.
General Notes
Toilets located in inpatient areas shall be specified as either 3.5 gallons per flush (gpf) blowout or 1.6 gpf siphon jet. They are equally effective in forcing matter through the trap and clearing the bowl.

Blowout Toilets
Blowout toilets are designed to clear the bowl with a high volume of water discharged from the bowl rim. Although these toilets are louder than siphon jet toilets, it has been noted that the higher volume of water allows matter to be forced further down the waste piping system. Please note that 3.5 gpf blowout toilets may not be permissible by code in all jurisdictions, and should be evaluated before selecting this option.

- Provides high velocity and jet action
- Noisy

Siphon Jet Toilets
Siphon jet toilets are designed with an incorporated water jet in the trapway that forces matter through the trap by creating suction in the bowl to pull the contents through as well. Siphon jets are manufactured with 1.1, 1.28 and 1.6 gpf and must be paired with the appropriate flush valve. Currently the 1.6 gpf models are recommended due to evaluation and OMH acceptance of performance.

- Economical water usage
- More commonly used due to quiet actions
Division 22 | Plumbing
Toilets

General Notes
Due to the possibility of inappropriate behavior, 3.5 gpf blowout toilets and 1.6 gpf siphon jet toilets are recommended.

Installation Notes
The wall surface must be flush with the toilet to avoid gaps that can become ligature points.

Specify standard toilets with heavy duty carriers. Specify bariatric toilets with bariatric carriers. Coordinate with manufacturers for specific carrier model specifications.

Code Notes
3.5 gpf blowout toilets may not be permissible by code in all jurisdictions, and should be evaluated before selecting this option.

Caution Notes
- Floor mounted toilets must be provided with complete closure between the toilet and wall to reduce ligature opportunities.
- Toilet seats that are not integral with the bowl create ligature opportunities.

Toilet Flushometers

General Notes
Concealed flush valves with remote infrared sensor controls reduce looping ligature opportunities.

Stainless Steel cover plate shall be surface-mounted to a steel angle assembly with securement to wall framing. Tamper-resistant sealant shall be applied to the perimeter of the plate to reduce looping opportunities.

Flushometer sensor shall be secured to the back side of the stainless steel plate with tamper resistant fasteners, with the plate cut to allow infrared sensor and/or push button operation.

Coordinate size of plate and angle assembly with water closet and grab bars selected to ensure adequate clearance for removal of plate.

Verify flush valve requirements of remote flushometer sensor to ensure it can be mounted to the rear of the stainless steel cover plate to reduce ligature opportunities.

NYS-OMH Standard
Concealed Flush Valve Assembly

Concealed Flush Valve Assembly with Push Button Actuator
Illustration shows a floor mounted toilet with a Sloan Flush Valve. Similar detail with infrared sensor.
General Notes
Concealed flush valves with remote infrared sensor controls reduce looping ligature opportunities.

Installation Notes
This product category in particular warrants considerable coordination.

Manufacturer supplied infrared cover plates may be designed for surface mounting and may require customization to provide a flush installation.

Acceptable flush valve manufacturers indicate an ability to assemble offset installations to avoid conflicts with grab bars. Verify with each manufacturer the specific requirements for offset plumbing extensions, access panel size and positioning, and remote infrared sensor connections and cover plate dimensions.

B-40904-1 Recessed Shower Activator
Note: Recessed shower activator is loopable and does not meet the ADA requirements for graspability.
**Diffusers & Grilles**

The selection of diffusers and grilles must be carefully considered in light of all relevant patient risk criteria, mechanical performance requirements, and the installed substrate. Louver and grille opening size and spacing is a critical consideration for structural performance, air flow and ligature resistance. The most secure and ligature-resistant assemblies are typically very heavy, requiring careful consideration for structural support and the sequence of construction.

The selection of radiator covers must be carefully considered with respect to all relevant patient risk criteria, mechanical performance requirements, and the installed substrate. Perforated radiator covers pose a particular risk as they can be looped by a thin shoelace or similar object. Because these enclosures are typically surface-mounted, careful consideration must be given to the installation conditions at these covers to prevent wedging/looping opportunities at the installed substrate. Tamper-resistant sealant should be utilized to close all gaps at perimeter of enclosure.

Diffusers and grilles should be securely mounted in place using tamper-resistant fasteners. Diffusers and grilles, and all accessible elements of the housing should be attached to permanently affixed concealed back angles that are part of the assembly, or to wall or ceiling framing elements. Because of the inherent variations in the manufacturing process, specifiers should procure samples of diffusers prior to specifying. Variations in finish along with manufacturing tolerances have caused unsafe installations in some products where other instances of the same line have achieved safe installations.

It should be noted that all ligature-resistant diffusers and grilles reduce air flow. Evaluation of this reduction shall be performed prior to incorporation/replacement of these diffusers and grilles.

**Escape**

Where escape is a primary risk criterion, diffusers and grilles should be reduced in size to the greatest extent possible. If diffusers and grilles are required to be large enough to allow passage, they should be securely mounted in place using welded joints and/or tamper-resistant fasteners. Diffusers and grilles, and all accessible elements of the housing should be attached to wall or ceiling framing elements and to the ductwork. Face plate construction should be thick enough to resist impact assaults and should not be removable, except with special tamper-resistant fastener tools. Passage restrictors should be permanently welded in the sleeve housing within the assemblies.

**Ligature Resistance**

Where ligature resistance is a primary risk criterion, diffusers and grilles should be specifically designed with closely spaced welded deep “S” and “Z” shaped vanes that prevent looping, or they should be protected by heavy gauge metal face plates with small, tightly spaced, perforated holes. Perforated grilles with 11 ga. (1/8” thick) face plates with holes no larger than 1/8” in diameter on 3/16” staggered centers have been tested and tend to resist looping, however all perforated grilles should be reviewed prior to specification/installation as manufacturing tolerances and fabrication errors may result in conditions that allow looping.

Perforated diffusers, grilles and radiator covers utilizing the industry standard of 3/16” hole on 9/32” spacing pose a particular risk as they can be easily looped by a thin shoelace or similar object. Because these devices are prevalent in existing inpatient environments, they are identified in this document as ACCEPTED in medium risk environments and noted with specific USE WITH CAUTION language. It should be noted that smaller holes and tighter spacing of holes, and heavier gauge metal plate are also available from several manufacturers as standard options. OMH will continue to perform additional testing on perforated grilles and diffusers and is researching alternative solutions. The risk of utilizing these devices shall be noted and evaluated by each facility.

**Concealing Contraband**

Where concealing contraband is a primary risk criterion, diffusers and grilles should be reduced in size to the greatest extent possible and securely mounted in place using tamper-resistant fasteners. Diffusers and grilles, and all accessible elements of the housing should be attached to wall or ceiling framing elements. Face plate construction should be thick enough to resist impact assaults and should not be removable, except with special tamper-resistant fastener tools.

**Additional Information**

CO2 sensors are not currently available in any ligature-resistant form and should only be used where accessible to patients in low or medium risk areas. CO2 sensors may be installed within ducts in high risk areas, but this will not qualify for the USGBC’s LEED credits for high occupancy mechanically ventilated spaces.

Division 23 | HVAC
Diffusers & Grilles

General Notes
The products listed in this section have been tested for patient safety on the patient accessible side only. Any concealed features of the products are incidental, and should not be assumed as "Accepted."

Perforated grilles and radiator covers utilizing the industry standard of 3/16” holes on 9/32” spacing are easily looped and may pose a ligature risk. Perforation patterns of 1/8” at 3/16” centers have been shown to resist looping but do not entirely eliminate this risk. The specifier must carefully review these products to determine whether the inherent risk of perforated products is appropriate for use prior to specification.

Installation Notes
Careful detailing of diffusers and grilles with substrate is required.

Some of the diffusers included in this document have several options for mounting, installation, and overall configuration. Several of the mounting options may limit access resulting in inaccessible ductwork for cleaning and maintenance. The specifier must carefully review these conditions with owner’s representative and maintenance personnel prior to specification and installation.

Performance Criteria
The configuration of ligature-resistant grilles may offer significantly less free area than similarly-sized standard commercial grilles. Engineers shall size grilles appropriately to achieve the required free area.

Finish
The metal finish of perforated and bladed grilles affects their ligature-resistance. Specify a powder-coated paint finish.

Caution: Perforated diffusers, grilles and radiator covers pose a particular risk as they can be easily looped by a thin shoelace or similar object.

---

**General Notes**

The products listed in this section have been tested for patient safety on the patient accessible side only. Any concealed features of the products are incidental, and should not be assumed as "Accepted."

Perforated grilles and radiator covers utilizing the industry standard of 3/16" holes on 9/32" spacing are easily looped and may pose a ligature risk. Perforation patterns of 1/8" at 3/16" centers have been shown to resist looping but do not entirely eliminate this risk. The specifier must carefully review these products to determine whether the inherent risk of perforated products is appropriate for use prior to specification.

**Installation Notes**

Careful detailing of diffusers and grilles with substrate is required.

Some of the diffusers included in this document have several options for mounting, installation, and overall configuration. Several of the mounting options may limit access resulting in inaccessible ductwork for cleaning and maintenance. The specifier must carefully review these conditions with owner’s representative and maintenance personnel prior to specification and installation.

**Performance Criteria**

The configuration of ligature-resistant grilles may offer significantly less free area than similarly-sized standard commercial grilles. Engineers shall size grilles appropriately to achieve the required free area.

**Finish**

The metal finish of perforated and bladed grilles affects their ligature-resistance. Specify a powder-coated paint finish.
General Notes
The products listed in this section have been tested for patient safety on the patient accessible side only. Any concealed features of the products are incidental, and should not be assumed as "Accepted."

General Notes
Provide hospital grade, tamper-resistant receptacles with arc fault and ground fault interruption in all patient accessible areas of all psychiatric hospitals. When it is not feasible to provide dual protection at the receptacle location, provide dual protection circuit breakers for all circuits with devices in patient accessible areas. See descriptions below for details.

In new construction or substantial renovations, where arc fault and ground fault interruption are both provided at the receptacle, provide electrical cover plates that are either thermoplastic nylon or metal. In minor renovation projects, where providing arc fault and ground fault interruption are beyond the scope of the project, provide only metal electrical cover plates. In all cases, fasten cover plates to receptacle with tamper-resistant fasteners that are accepted in the NYS-OMH Patient Safety Standards. Two fasteners are recommended, though not required, for all cover plates.

Hospital Grade Receptacles
Hospital grade receptacles are on emergency circuits and receive back-up power from a generator. Review applicable codes to identify areas Hospital Grade Receptacles are required.

Tamper-resistant Receptacles
Tamper-resistant receptacles feature built in safety shutters that block foreign objects from being inserted into the receptacle. Shutters remain closed if an object is inserted into one side of the receptacle. The shutters open only when a two bladed or grounded plug is inserted. Excessive tampering may compromise the receptacle.

Provide tamper-resistant receptacles with arc fault and ground fault interruption in all patient accessible areas of all psychiatric hospitals.

AFCI (Arc Fault Circuit Interrupter) Protection
AFCI protection guards against damage or fires which can result from arcing and sparking that can arise from deteriorated wires, poor connections and breaches in wire insulation. Arc fault self-harm can be induced by holding two insulated conductors (e.g. paper clips while holding them in flexible plastic or rubber as an insulator) and bending them close enough together to get an electrical current to arc between them, perhaps in an effort to create a cigarette lighter or start a fire.

GFCI (Ground Fault Circuit Interrupter) Protection
GFCI protection guards against ground faults, and are an effective means of preventing electrical shocks. Ground fault self-harm can be induced by grounding oneself (e.g. to the floor) while holding one conductor (i.e., paper clips) in the hot side of the receptacle, causing the electrical current to flow through oneself to the ground.
Division 26 | Electrical
Receptacles & GFCI/AFCI Circuit Breakers

General Notes
See comments on previous general notes page.

Provide tamper-resistant receptacles with arc fault and ground fault interruption in all patient accessible areas of all psychiatric hospitals.

Provide dual protection circuit breakers for all circuits with devices in patient accessible areas when it is not feasible to provide dual protection at the receptacle location.

Circuit breakers are located within secure electrical panels outside of the patient environment. They are included in this document because they enhance the patient safety of the built environment.

Wall Plates

General Notes
Thermoplastic nylon wall plates are recommended. They are more flexible than thermoset (urea) products and have a shinier, glossy finish. Molded thermoplastic nylon wall plates also perform for maximum resistance to impact, abrasion, fading and discoloration. Nylon is resistant to stresses associated with high abuse applications.

Installation Notes
Nylon is pliable so it should be installed in a bed of tamper resistant sealant.

Unbreakable Nylon Wall Plates

Hubbell
www.hubbell-wiring.com
Security Wall Plates (Metal)
Caution: Intended for use in OMH facilities only when other alternatives are considered unsuitable due to excessive tampering by patients.
General Notes
Thermoplastic nylon wall plates are recommended. They are more flexible than thermoset (urea) products and have a shinier, glossy finish. Molded thermoplastic nylon wall plates also perform for maximum resistance to impact, abrasion, fading and discoloration. Nylon is resistant to stresses associated with high abuse applications.

Polycarbonate is a thermoset plastic, so doesn’t perform as well in this application.

Installation Notes
Nylon is pliable so it should be installed in a bed of tamper resistant sealant.

Cortech USA
www.cortechusa.com

Tiger Plates
Caution: Intended for use in OMH facilities only when other alternatives are considered unsuitable due to excessive tampering by patients.

Installation Note: Not suitable for gypsum wallboard installations. Plates fasten directly to the wall in lieu of typical recessed back box. Recommended for concrete or masonry walls only.

Kenall Manufacturing
www.kenall.com

Mighty Mac WSP/WPP Series Wall Plates
Caution: Intended for use in OMH facilities only when other alternatives are considered unsuitable due to excessive tampering by patients.
Division 26 | Electrical
Light Fixtures, General

Performance Criteria

Provide lighting that meets the following criteria:

- Lighting: High efficiency, maintaining visual performance where applicable. Provide dimmable ballasts as required.
- Lamps: NYS-OMH standard is LED due to its high efficiency, performance, reliability, and cost effectiveness.
- Diffuser/Lens: Provide 1/8" thick minimum polycarbonate prismatic or translucent lens. Lens frame requires enough edge bite in order to retain the lens during maximum deflection.
- Housing: Durable and indestructible.
- Exposed Fasteners: To be tamper-resistant with finish to match housing.
- Maintenance: Specify fixtures with standard replacement parts, lamps and ballasts. Consider the minimum number of security fasteners required for patient safety.
- Approvals: Underwriters Laboratories (UL) and others as applicable.

Installation Notes

Install light fixtures flush with substrate. It is critical to ensure there are no gaps. Any remaining gaps shall be filled with tamper-resistant sealant.

Coordinate lighting fixture specifications with new/existing ceiling substrate prior to ordering. When installing light fixtures into a medium or high risk ceiling system, it is imperative that the installation of the light fixture does not diminish the patient safety of the ceiling system as a whole. Therefore, it is recommend to mechanically fasten light fixtures to the ceiling system in order to maintain the appropriate level of patient safety at the ceiling plane.

The following properties identified in the product descriptions of each fixture included in this section were present in the sample tested for patient safety:

- Size
- Required specification options
- Mounting configuration
- Inner lens thickness
- Outer lens thickness
- Housing
- Finish

Altering any of these properties may impact patient safety and therefore warrants additional testing of a sample fixture for patient safety evaluation.

Additional Notes

Verify photometrics of light fixtures with polycarbonate lenses during the project design.

The Office of Mental Health Lighting Standards Handbook is intended for use by Plant Superintendents and Design Consultants as a reference guide when replacing light fixtures. The Handbook details which energy saving options may be best for each application. It is important to also reference the Office of Mental Health Patient Safety Standard Guidelines when replacing or specifying light fixtures in patient areas. OMH reinforces the importance of patient safety before energy efficiency in their facilities in all patient areas.

Visage Behavioral Health Flush
CV1680
Size: 4.5” x 48”
Required Options: TRS (tamper resistant fasteners)
Mounting: drywall (ceiling & wall) and metal security ceiling
Outer Lens: clear polycarbonate
Housing: extruded aluminum
Finish: antimicrobial powder coat

Lenga Behavioral Health Flush
CM2062
Size: 4.5” x 48”
Required Options: FLGD (flanged drywall ceiling)
Mounting: drywall and metal security ceiling
Inner Lens: acrylic lens
Outer Lens: clear polycarbonate
Housing: extruded aluminum
Finish: antimicrobial powder coat
Division 26 | Electrical
Light Fixtures, Interior, General, Recessed

Only those models listed have been tested. Models with different options in any category warrant additional testing of a sample fixture.

Viscor
www.viscor.com

Certolux VRUO
Size: 1'x4, 2'x2', 2'x4'
Required Options: O (overlapping door)
Mounting: drywall and metal security ceiling
Inner Lens: may vary
Outer Lens: .125 clear polycarbonate
Housing: 16 gauge cold rolled steel
Finish: polyester powder coat

Certolux MBH1 2x2
Size: 2'x2'
Required Options: I (inset door)
Mounting: drywall and metal security ceiling
Inner Lens: contoured diffuse polycarbonate
Outer Lens: .250 clear polycarbonate
Housing: 20 gauge cold rolled steel with 18 gauge flange
Finish: gloss white polyester powder coat

www.lightingproducts.philips.com

CE-11500 SC Series Exit Light
Diffuser|Lens: No lens provided.
Housing: Two piece die cast aluminum with chevron cutouts.
Finish: Epoxy based powder coat or brushed aluminum.

Note: Cutout letters/chevrons allow access to interior of fixture.

Philips Chloride
www.lightingproducts.philips.com

CE-11500 SC Series Recessed Exit Light
Diffuser|Lens: Polycarbonate/Lens.
Housing: Two-piece die cast aluminum with 18 gauge recessed back box and vandal resistant lens.
Finish: Epoxy based powder coat or brushed aluminum.

Note: Lens does not sit flush inside recessed back box for tight and secure fit.
Division 27 | Communications
Wireless Routers

General Notes
Wireless routers shall be mounted above the ceiling systems in medium and high risk areas when possible. It should be noted that functionality may be compromised when routers are installed above metal ceilings.

Wireless routers can be mounted below the ceiling systems in low risk areas.

Oberon
www.oberoninc.com

Model 1041-WA
11" single piece recessed ceiling Wi-Fi access point mount/white plastic dome
Installation Notes
It is recommended to specify recessed wall clocks with polycarbonate lenses.

Sapling Synchronized Clock Systems
www.sapling-inc.com

Flush Mount Housing Kit for an Analog 12" Square Clock (V1.0) (A-FLUSH-MNT-12S-KIT-1)
Frame for analog clocks within a synchronization system with built-in web interface, data received from preprogrammed third party NTP servers for reliability and redundancy, built-in self-diagnostics and email alerts for various functions, and ability for users to view, monitor, and send various commands to all IP clocks in the system. Provides automatic daylight saving time changes, and 12 or 24 hour display.

Compatible with SAL, SAP, SAW, and SAM Series clocks, providing different synchronization technologies.

Digital Flush Mounted Polycarbonate Frame (V1.0) (D-XXX-FIL-XXX-F-KIT-1)
Frame for digital clocks within a synchronization system with built-in web interface, data received from preprogrammed third party NTP servers for reliability and redundancy, built-in self-diagnostics and email alerts for various functions, and ability for users to view, monitor, and send various commands to all IP clocks in the system.

Compatible with SBP and SBD Series clocks, providing different synchronization technologies.
Installation Notes
It is recommended to specify recessed wall clocks with polycarbonate lenses.

Primex Wireless
www.primexwireless.com

XR Digital Clock
Compatible with Primex XR Series
Transmitters providing wireless synchronized timekeeping. Specify GPS.
General Notes
At this time, NYS-OMH is not aware of any patient-safe fire alarm components.

Device covers are susceptible to abuse and can be looped/weaponized. Careful consideration is required when specifying and locating devices associated with fire alarm and other electronic safety and security systems. It is therefore extremely important to locate these items in such a way to prevent patient access and interaction in high and medium risk areas.

Fire alarm notification devices are required to be ceiling mounted in high risk areas.

It is recommended that fire alarm notification devices be ceiling mounted in medium risk areas.
